Prompt 2: Step-by-Step Guide — Creating and Managing Tasks in Task Manager CLI

Process Overview

This guide outlines the procedure for creating, updating, and managing tasks using the Task Manager Command Line Interface (CLI). The steps demonstrate how users interact with the system to perform essential task management functions such as creating tasks, listing them, updating their status, adding tags, and viewing task details.

Prerequisites

Before using the Task Manager CLI, ensure the following requirements are met:

- Python version **3.11 or higher** is installed
- The Task Manager project files are downloaded or cloned locally
- Access to a terminal or command prompt
- The project folder is accessible on your computer

Step-by-Step Instructions

Step 1: Open the Terminal

Open your terminal or command prompt and navigate to the Task Manager project folder.

```
cd task-manager
```

This ensures that all required project files such as cli.py are accessible before running commands.

Step 2: Create a Task

Create a new task using the create command. A task title is required, while priority and due date are optional parameters.

```
python cli.py create "Buy groceries" --priority 2 --due "2026-03-30"
```

Expected Result:
A confirmation message appears showing the unique task ID.

[Placeholder: Screenshot of task creation output]

Step 3: List Tasks

Display all tasks currently stored in the system.

python cli.py list

Expected Result:
A list of all tasks is displayed, including task ID, priority level, status, and due date information.

[Placeholder: Screenshot of task list output]

Step 4: Update Task Status

Change the progress status of a task using its task ID.

python cli.py update-status 1 done

Expected Result:
The task status changes from its current state (e.g., todo) to done.

[Placeholder: Screenshot of updated task status]

Step 5: Add Tags to a Task

Tags allow tasks to be categorized for easier organization.

python cli.py add-tag 1 "shopping"

Expected Result:
The specified tag is added to the selected task.

[Placeholder: Screenshot of task with added tag]

Step 6: View Task Details

Display detailed information about a specific task.

python cli.py show 1

Expected Result:
The system displays full task details, including description, priority, due date, status, and associated tags.

[Placeholder: Screenshot of task details view]

Common Mistakes

Some typical errors users may encounter include:

- Entering dates in the wrong format (must be **YYYY-MM-DD**)
- Using an incorrect or non-existing task ID
- Typing invalid status values
- Running commands outside the project directory

Troubleshooting

If issues occur, consider the following solutions:

- **Command fails to run:**
  Verify that Python is installed and correctly added to the system path.
- **Task does not update:**
  Ensure the task ID exists by running the list command.
- **No tasks displayed:**
  Confirm that tasks were successfully created before listing them.
